Group Organisation Plan

Sprint	Role	Who's doing it	What it involves
1	Database	Fai'Zah	Setting up/creation of database as well as justification of design.
	Programming	Daniel	Implementation of the authentication and view of doctors patients user stories.
	Testing	Alex	Creation of tests for program features and logs of test results.
	Scribe	Nathan	Noting everything said in meetings as well as the group organisation plan for sprint 1.
2	Programming	Nathan & Fai'Zah	Implement the next 3 user stories.
	Scribe	Alex	Continue to make notes and other documentation of meetings.
	Testing	Daniel	Creation of tests for the further user stories and logging results.
3	TBD	TBD	TBD

The roles of the third sprint will be updated/added to the table at the end of the second sprint in a similar way to how the roles have been delegated for the second sprint now the first is coming to an end. For the first sprint there were 4 main leader roles; database, programming, testing and scribe although we all to an extent contributed to the other roles. For the second sprint we have decided that there isn't a real need for one person to be dedicated to the database role as the majority of the work for that was completed by Fai'zah in sprint one and therefore two people will be predominantly focusing programming, implementing the chosen user stories. Testing is still important and the role of scribe will continue into the second sprint as those roles have still been deemed as necessary.
